ABOUT ME

I am a dedicated Full Stack JavaScript/TypeScript Developer with a passion for building responsive, user-friendly websites and web applications. Proficient in HTML, CSS, JavaScript, TypeScript, and modern frameworks across the entire stack, I specialize in creating end-to-end solutions that are functional, scalable, and visually appealing. On the frontend, I work with Vue/Nuxt and React/Next (with a strong preference for React and Next). On the backend, I'm fully proficient in Node.js, Express, and NestJS. My focus is on creating seamless digital experiences that meet user needs and solve real-world problems.

EXPERIENCES

Full-Stack Developer - Confidential Project (Telegram Mini-App)

Oct 2025 - Feb 2026 - On-Site

I architected and developed a complex, data-driven simulation game as a Telegram Mini-App utilizing a modern JavaScript/TypeScript stack. The frontend features dynamic, responsive user interfaces built with React and Next.js, seamlessly integrating Phaser.js to render complex in-game dynamics and visual events. To support this, I developed a robust backend API using Node.js and Nest.js to handle Telegram-based user authentication, manage real-time game states, and efficiently process high-volume user data. Furthermore, I designed and implemented complex algorithmic logic for variable-driven probabilities and dynamic outcome generation based on user inputs, ultimately ensuring high code maintainability and flawless communication between the Telegram bot interface and backend services.

Front-End Developer - [Roshanegar Rayaneh Datees](#)

Apr 2025 - Oct 2025 - On-Site

Contributed to the development of [Sampat](#), a CRM platform designed for [The Organization of Religious Societies and Associations](#), featuring a dynamic form builder supporting various field types and multi-role workflow management for form review and approval. Fixed major bugs, optimized performance, and implemented new features using Vue.js.

Additionally, developed a complete website from scratch — including a landing page and an admin panel (Metronic-based) — for [The Specialized Center for the New Islamic Civilization](#). The admin panel was designed as a reusable dashboard framework to be utilized across future company projects.

Front-End Developer - [Mobasheran](#)

Mar 2024 - Apr 2024 - Remote

Developed and optimized public pages and user panels using HTML, CSS, and Tailwind, resulting in a 25% improvement in site performance. Integrated accessibility features to enhance usability for a diverse range of users.

SKILLS

Front-End Development:

Full proficiency in HTML, CSS, JavaScript, TypeScript, ReactJS, NextJS, VueJS and NuxtJs.

Skilled in TailwindCSS, Bootstrap, and responsive design principles.

Back-End Development:

Full proficient in Node.js, Nest.js, MongoDB and PostgreSQL.

Version Control and Tools:

Proficiency in Git, Figma, AdobeXD, and collaborative workflows.

LANGUAGES

Persian - native

English - Intermediate (B1)

EDUCATION

Islamic Azad university

Oct 2023 - present

Pursuing a Bachelor's Degree in Computer Engineering
